Art Unit: 2161

#### **DETAILED ACTION**

This action is responsive to Applicant's RCE request filed on July 16, 2004 and amendment submitted on June 1, 2004.

#### Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on July 16, 2004 has been entered.

Claims 2, 6, 9, 13, 16 and 20 are cancelled thus claims 1, 3-5, 7, 8, 10-12, 14, 15, 17-19 and 21-24 are pending.

#### Claim Objections

Claim 8 is objected to because of the following informalities: On line 9 the term "not" should be replaced with "note". Appropriate correction is required.

#### Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1, 3-5, 7, 8, 10-12, 14, 15, 17-19 and 21-24 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Art Unit: 2161

Regarding claims 1, 8, 15 and 22. The segment, "an image generated from the electronic document" is indefinite. It is not clear whether the image is the electronic document not including the note or a new image without defined boundaries. Also, the step of "extracting information about the note from the read image of the document printed on the paper and a note handwritten on the paper" is indefinite. Only one note appears supported by the disclosure. To expedite the examination, Examiner interprets the image as an electronic document **not including the note** and note as the handwritten note.

Regarding claims 3, 4, 5, 7, 10, 11, 12, 14, 17, 18, 19 and 21 depend from claims 1, 8 and 15 respectively, and therefore contain the deficiencies of those claims.

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 8, 15 and 22-24 are rejected under 35 U.S.C. 102(b) as being anticipated by Takeda et al (U.S. Patent No. 4,748,678)

Regarding claims 1, 8, 15 and 22-24 Takeda discloses a method, program and system for electronically managing a note taken in a paper document printed from an "electronic document not including the note" (hereafter, original document) when the document is printed and used by a person, comprising: (abstract)

Art Unit: 2161

reading as an image a document printed on a paper in which a note is taken; (figure 1, item 4, and fig. 7, col. 7, lines 24-35)

extracting information about the note from the read image of the document printed on the paper and a note handwritten on the paper; (col. 8, lines 63-65)

correlating and electronically storing the original document and the information about the note; (figures 7, 8, 11 and col. 9, lines 3-20 and summery, Takeda) and,

obtaining an image of the note by taking the difference between the original document and the read image (figures 7 and 8, Takeda).

(Note: obtaining an image of the note by taking the difference between the original document and the read image is shown in fig. 7 and supported by location attributes in fig. 8 of Takeda)

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1, 3-5, 7, 8, 10-12, 14, 15, 17-19 and 21-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ching (U.S. Patent No. 6,533,168) in view of Takeda et al (U.S. Patent No. 4,748,678).

Regarding claims 1, 8, 15 and 22-24 Ching discloses a method, program and system for electronically managing a note taken in a paper document printed from an "electronic document

Art Unit: 2161

not including the note" (hereafter, original document) when the document is printed and used by a person, comprising: (figures 1a and 3, item 304, and col. 4, lines 9-14, Ching)

reading as an image a document printed on a paper in which a note is taken; (col. 4, lines 9-14, 17 and 18, Ching)

extracting information about the note from the read image of the document printed on the paper and a note handwritten on the paper; (col. 4, lines 9-14, Ching) and,

correlating and electronically storing the information about the note with the read image (col. 4, lines 14-17, and col. 10, lines 32-43, Ching) but does not explicitly teach correlating the original document with the information about the note and that the image data of the note is obtained by taking a difference between the original document and the read image.

However, Takeda teaches storing and retrieving image system that correlates an original document with information about a note (figures 7, 8, 11 and col. 9, lines 3-20, Takeda) and obtaining an image of the note by taking the difference between the original document and the read image (figures 7 and 8, Takeda).

Hence, having Ching system correlating information about the note with the read image (col. 10, lines 40-42, Ching), it would have been obvious to a person of ordinary skill in the art at the time the invention was made to correlate the information about the note with the original document as done in Takeda. One would have been motivated to store the correlation information about the note and the original document to keep track of the note and the related original document to avoid storing the read image which includes the original document with a note.

Art Unit: 2161

Further, having Ching system, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to obtain an image of the note by taking a difference between the original document (receipt) and the read image (receipt with note) as done in Takeda (figures 7 and 8, Takeda). One would have been motivated to take the difference between the receipt and the receipt with a note to exclusively store the image of the note for future processing.

(Note: obtaining an image of the note by taking the difference between the original document and the read image is shown in fig. 7 and supported by location attributes in fig. 8 of Takeda)

Regarding claims 3, 10 and 17, Ching/Takeda disclose recognizing a character written in the image data of the note (col. 10, lines 32-41, Ching).

Regarding claims 4, 11 and 18, Ching/Takeda disclose the original document, a note image and a recognition result of the note image are correlated and electronically stored (figures 7, 8, 11 and col. 9, lines 3-20, Takeda).

Regarding claims 5, 12 and 19, Ching/Takeda disclose searching and recognizing with a search keyword and displaying the data (fig. 7, items 704 and 705 and fig. 2a, item 208, Ching).

Regarding claims 7, 14 and 21, Ching/Takeda disclose location information of the note within the printed document (fig. 8, Takeda).

Art Unit: 2161

## Response to Arguments

Applicant's arguments filed on June 1, 2004 have been considered but are moot in view of the new ground(s) of rejection.

#### Conclusion

To expedite the process of examination Examiner requests that all future correspondences in regard to overcoming prior art rejections or other issues (e.g. 35 U.S.C. 112, objections and the like) set forth by the Examiner that Applicants provide and link to the most specific page and line numbers of the disclosure where the best support is found (see 35 U.S.C. 132).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Marc R Filipczyk whose telephone number is (571) 272-4019. The examiner can normally be reached on Mon-Fri, 8:30am-5pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Safet Metjahic can be reached on (571) 272-4023. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
